SUMMARY

Product Manager with 1+ years of experience building AI and fintech products in Nigeria. Experience spans user research, PRD writing, scoping, and shipping MVPs, including a live two-sided marketplace built solo by directing an AI coding agent.

SKILLS AND PROFICIENCIES

Product: PRDs, user research, user stories, roadmapping, prioritization (RICE, MoSCoW), Agile

Tools: Figma, Linear, Jira, Postman

Technical: HTML, CSS, JavaScript (basic), Supabase, Postgres, Vercel, GitHub

Analytics: Google Analytics, Hotjar

AI Tools: Claude, ChatGPT, Google Stitch, Lovable, Mixpanel AI

WORK EXPERIENCE

HNG - GenZ.Ad — Jan 2025 - Mar 2025

Product Manager (Part-Time), Remote

- Contributed to the development of a one-click AI ad generation tool, cutting manual design effort by approximately 90%.
- Wrote PRDs, user flows, and acceptance criteria; coordinated 3 engineers and 1 designer.
- Shipped a working prototype in 4 weeks and onboarded 10+ beta users within 2 weeks.
- Ran sprints in Linear and reviewed onboarding and core UX screens in Figma.

Intern Pulse - Pedmonie — Jan 2025 - Apr 2025

Product Manager (Intern), Lagos, Nigeria

- Wrote the PRD and defined the MVP structure for Pedmonie, a payment integration and automation platform.
- Planned Paystack and Flutterwave integration for PCI DSS-compliant transaction handling.
- Defined authentication flows, including OTP.
- Wrote user stories for transaction monitoring, fraud alerts, and security workflows.
- Ran competitor analysis across Nigerian fintech products to guide feature prioritization.

PROJECTS

CareerLink-Up — 2026

Next.js, Supabase, Paystack, Resend, Vercel

- Sole product manager and builder of a two-sided marketplace matching Nigerian career switchers with mentors who made the same transition; built by directing an AI coding agent (Claude) against decisions researched and reviewed independently.
- Ran a 14-question survey of 11 respondents to test demand and pricing; used results to set a 15% commission model and a mentor pricing guide (N5,000-N10,000 per 30-minute session).

- Cut MVP scope from a broad platform down to profiles, discovery, booking, and payment, after data showed users would not pay for the most-requested feature (communities) but named cost as the top barrier to paid mentorship.

AI Financial Copilot — 2026

React/Next.js, Node.js, PostgreSQL, OpenAI API

- Designed a concept for an AI-powered financial insight feature for Moniepoint Business, turning transaction data into profit/loss visibility, spend categorization, and anomaly alerts for Nigerian small business owners.
- Ran a 17-respondent survey to test problem and feature demand; found the strongest interest in profit/loss visibility (13/17) and daily/weekly summaries (11/17).
- Used trust data from the same survey (11/17 wanted to review AI actions before they happened) to scope the product as recommendation-only, with no autonomous transactions in the MVP.
- Defined a three-stage MVP and an architecture separating verified transaction data from AI-generated interpretation, so the AI explains results rather than calculating them.
- Used Google Stitch and ChatGPT in the design and content-drafting process.

ACHIEVEMENTS

- Cut ad design creation time by ~70% through automation at GenZ.Ad.
- Delivered a functional AI ad-generation prototype in 4 weeks and onboarded 10+ beta users.
- Designed secure fintech authentication and fraud-monitoring flows at Pedmonie.
- Built and deployed a live two-sided marketplace solo by directing an AI coding agent, CareerLink-Up.

EDUCATION

University of Lagos — Lagos, Nigeria

B.Sc., Human Kinetics
